

what is python?  
what are the features of python?  
why python is called interpreter language?  
does python have compiler?  
what is PVM & how it works?  
what is memory management?  
what is mean by open source language?  
why python is called dynamic type language?  
what is list & list comprehension?  
what is tuple & why it is immutable?  
what is the diff between list & tuple?  
explains commands add, insert, update, del, pop, remove, append extend?  
what is PEP?  
what are fundamental & collection datatypes?  
what is indexing & slicing?  
wap using slicing?  
what are the various ways to iterate list?  
what are the various ways to reverse the list?  
what is for loop & while loop & its difference?  
what is file handling & exception handling?  
what are the modes of file handling?  
what is anonymous function?  
types of functions?  
difference between args & kwargs?  
what is decorator & generator?  
what is tuple comprehension?  
what is virtual environment?  
what is palindrome & armstrong no?  
wap to reverse string without using inbuilt function.  
wap for prime no/  
wap for armstrong no.  
wap for palindrome.  
wap for factorial and using decorators also  
wap to reverse string without using inbuilt function.  
wap for decorator & generator.
